# ‘Sterile’ filtration

Before you start, read the instructions!

Friday 18<sup>th</sup> March 2016, 11:40am  
Beer Garden Seminar Room at BeerX.

If you think that you may need to ‘sterile’ filter your beer, then this 20 minute presentation will aid your decision making process and help you to avoid some of the common and potentially expensive mistakes.

Beginning with some basic filtration theory, we will ask the questions what is ‘sterile’ filtration and why do you want to do it?

We will look at your final filtration options and also consider the pre-treatment and the ancillary operations that will maximize cost-effectiveness and quality.

## Meet the filtration expert

*Peter Riddell is Director of Integrated Processing Technologies Limited, a recent start-up company that is founded upon his 30+ years' experience in hygienic processing and supporting multinational Food & Beverage producers globally.*
